PRODUCT GUIDE

# Workeasy360 AI Commerce

A multi-store e-commerce builder: storefront, checkout, order management and AI tools in one product.

**Features · Shopper journey · Merchant (Admin) journey**

Version 1.0 · October 2026 · Prepared by WorkEasy360

CONTENTS

# What is in this guide

| # | Section | What it covers |
|---|---|---|
| 1 | Product overview | What the product is, who uses it and how it is built |
| 2 | Users and roles | The five store roles and what each can do |
| 3 | Feature catalogue | All 14 admin modules and the storefront, feature by feature |
| 4 | Shopper (user side) flow | From finding a shop to paying, tracking, downloading and reviewing |
| 5 | Merchant (admin side) flow | From sign-up and store setup to daily orders, growth and team |
| 6 | Order lifecycle | How an order moves between statuses, for each payment method |
| 7 | Security, privacy and platform | How stores, data and payments are protected |
| A | Appendix: permissions matrix | Which role can open which module |

SECTION 1

# Product overview

Workeasy360 AI Commerce lets any business open one or more online shops and run them from a single admin. Merchants add products, set up payments and delivery, design the storefront and handle orders. Their shoppers buy at the shop's own web address.

## Who it is for

- **Merchants**: small and growing businesses that sell physical goods, digital downloads or bookable services, in India or abroad.
- **Merchant teams**: owners, admins, staff, fulfilment staff and analysts who share the work of running a store.
- **Shoppers**: the merchant's customers. They browse and buy on the storefront without making an account.

## The three parts of the product

| Part | Who uses it | What it does |
|---|---|---|
| **Merchant Admin** | Store owners and their team | Sign-in, store creation and the 14 modules that run the business: catalogue, orders, money, design, AI and settings. |
| **Storefront** | Shoppers (public) | Each store's public shop at */s/<store-address>* or the merchant's own domain: home page, search, products, cart, checkout, order page, reviews. |
| **Background worker** | Runs automatically | Sends emails, cancels unpaid card orders after 30 minutes, scans uploads for malware, runs AI jobs and rolls up daily analytics. |

## Key highlights

| Highlight | What it means for the merchant |
|---|---|
| **Multi-store** | One account can own and run several stores, each with its own catalogue, team, design and payments. |
| **Every way to get paid** | Razorpay (UPI, cards, netbanking, wallets), Stripe, UPI, bank transfer, cash on delivery, and ordering through WhatsApp or Telegram chat. |
| **Three kinds of product** | Physical goods with variants and stock, digital downloads delivered after payment, and services booked into time slots. |
| **Built for India and beyond** | GST/VAT (inclusive or added), GSTIN on invoices, shipping zones by PIN code, storefront in English, Hindi and Arabic (right to left). |
| **AI Studio** | Drafts product and collection copy, SEO, tags, review summaries and sales insights in 13 languages. Nothing changes until the merchant applies it. |
| **No-code design** | Section-based home page, colours, fonts, logo, menus and content pages, with a live preview before publishing. |
| **Safe by design** | Each store's data is isolated in the database, payment keys are encrypted, staff roles limit access and every change is logged. |

SECTION 2

# Users and roles

Every member of a store has one role. The admin hides modules a role cannot use, and the server checks the role again on every request, so hiding is never the only protection.

| Role | Typical person | What they can do |
|---|---|---|
| **Owner** | Business owner | Everything, including managing the store itself (its address, suspension and plan). A store always keeps at least one owner. |
| **Admin** | Store manager | Everything except managing the store itself. Can connect payments, issue refunds, change settings and manage staff. |
| **Staff** | Shop assistant, marketer | Products, inventory, media, orders (no refunds), customers, offers, reviews, analytics, store design and AI Studio. |
| **Fulfilment** | Warehouse or packing staff | See products and orders, adjust stock and fulfil orders: pick, pack, ship and add tracking. |
| **Analyst** | Accountant, investor, analyst | Read only: products, inventory, orders, customers, finances and analytics. |

**Refunds move money**, so only owners and admins can issue them. A person inviting staff can only give a role at or below their own, and the last owner of a store cannot be removed or demoted.

## Shoppers

Shoppers do not need an account. They identify themselves with an email (for receipts) at checkout. Each order gets a private order link, sent by email, that shows its status, payment instructions, tracking, downloads and a review form.

SECTION 3

# Feature catalogue

The admin is organised into 14 modules in six groups. Below, each module is described with what it does and how it works.

## Overview

### Dashboard

*How the store is doing today and what to do next.*

- Key figures (KPIs): sales, orders, average order value and visitors, compared with the previous period.
- Recent orders and tasks that need attention, such as unpaid or unfulfilled orders.
- A getting-started checklist for new stores, plus links to the live shop.

## Catalog

### Products

*Physical goods, digital downloads and bookable services, with variants.*

- Three product types: **physical** (shipped, with weight and stock), **digital** (files downloaded after payment, with download limits and expiry) and **service** (booked into time slots).
- Options and variants (size, colour or any option), each with its own price, compare-at price, SKU and stock.
- Photos and video from the Media Library; draft, active and archived states; tags and per-product tax rate.
- SEO title, description and web address (handle).
- CSV import with a **preview step** that shows what will be created or updated and flags errors before anything is saved; CSV export and bulk actions.

### Collections

*Group products for menus, pages and the home page.*

- **Manual** collections, curated product by product, with a custom sort order.
- **Automated** collections built from rules (tag, price, product type); matching products join and leave automatically.
- Collection image, description and SEO.

### Inventory

*Stock for every variant, with a full history.*

- Per-variant stock levels and low-stock thresholds.
- Every adjustment is recorded with a reason in a ledger (received, damaged, recount, sale, refund and so on).
- Stock is held for shoppers during card checkout and released if they do not pay; cancelling an order can restock it.
- Capacity for bookable services.

### Media Library

*Every image, video and file the store uses.*

- Direct uploads from the browser to storage; every file is scanned for malware before it can be used.
- Folders, tags and alt text; see where each file is used.
- Digital product files are private and only reachable through signed, time-limited download links.

## Sales

### Orders

*Every order: paid online, on WhatsApp/Telegram, by UPI, bank transfer or cash on delivery.*

- Status tabs: unpaid, to fulfil, shipped and completed, with search.
- Order timeline of payments, fulfilment, emails and internal notes.
- Mark chat and offline orders as paid; cancel with optional restock.
- **Partial fulfilment** with carrier and tracking number; the shopper is emailed when items ship.
- Refunds back to the card through the gateway, or recorded by hand for offline payments, with optional restock.
- PDF invoices (with GSTIN when set); **Bookings** calendar; **Customers** with order history; **Abandoned checkouts**.

### Offers

*Discount codes and automatic deals.*

- Percentage off, fixed amount off, free shipping, and **Buy X get Y** (same or different products, free or a percentage off, cheapest items discounted, optional per-order limit).
- Offered as a code the shopper types, or applied automatically.
- Minimum spend, product or collection scope, start and end dates, total usage limits and once-per-customer rules.
- Redemption reporting.

### Reviews

*Ratings from verified buyers; the merchant decides what goes live.*

- Only real buyers can review: from their order page or an emailed review link (valid 60 days).
- Moderation queue: publish, hide or reply publicly.
- Optional auto-publish of 4 and 5 star reviews; ratings summary shown on product pages.

## Operations

### Shipping

*Where the store delivers, what it costs, and local pickup.*

- Shipping zones by country, state or PIN code prefix.
- Flat, weight-based and order-value-based rates, several speeds per zone, free shipping above an order value.
- Local pickup with an address; cash on delivery switched on or off per zone.

### Payments & Finances

*How shoppers pay, and every rupee that moves.*

- Connect the merchant's **own Razorpay or Stripe account** by pasting API keys and a webhook secret. Keys are checked with the gateway, then stored encrypted.
- Turn on WhatsApp and Telegram chat checkout, UPI, bank transfer and cash on delivery, each with the merchant's own payment instructions.
- Takings and a ledger of payments and refunds; test-mode payments are listed but not counted.
- Taxes: GST or VAT, prices inclusive or tax added, per-product rates and GSTIN on invoices.

## Growth

### Analytics

*Sales, visitors and what turns them into buyers.*

- Revenue, orders, average order value, visitors and conversion rate for any date range.
- Funnel from visit to product view, cart, checkout and purchase; traffic sources; top products; repeat buyers.
- CSV export. Visitor tracking is anonymous: no IP addresses or personal data, Do Not Track is respected and raw events are kept 90 days.

### Store Design

*The storefront's look, pages and menus, with a live preview.*

- Section-based home page: hero, product grid, collections, banner, testimonials, FAQ and text.
- Colours (with contrast checks), fonts, button style, logo, announcement bar, header and footer menus.
- Autosaved draft, live preview on desktop and mobile, shareable signed preview links, then publish or discard.
- **Content pages** (About, Shipping, Returns, Privacy, Terms, Contact) from templates pre-filled with the store's details, written in light Markdown with live preview.
- Storefront in English, Hindi and Arabic (right to left) with automatic browser-language detection and a language switcher.

### AI Studio

*Write, translate and set up faster. Nothing changes until it is applied.*

- Product descriptions, SEO text and tags; collection copy; review summaries; sales insights.
- 13 output languages; runs on OpenAI or Google Gemini.
- Jobs run in the background with a daily allowance per store; results come back as proposals the merchant applies field by field.

## Store

### Settings

*Store details, staff, checkout and notifications.*

- **General**: store name, address (web address), contact details, currency, time zone, business address and GSTIN.
- **Checkout**: delivery and pickup options, chat ordering numbers, order-email settings.
- **Domain**: connect a custom domain, verified by a DNS TXT record, with an automatic HTTPS certificate.
- **Staff**: invite by link or email, change roles, remove members.
- **Audit log**: an append-only record of who changed what and when.

## Storefront (shopper-facing) features

| Area | Features |
|---|---|
| **Browsing** | Home page built in Store Design, product search with sorting (price low to high, high to low), collection pages, content pages, pagination. |
| **Product page** | Photos, variant picker, live stock ("Only 3 left"), booking date and time picker, download limits, ratings and verified reviews. |
| **Cart** | Quantity changes, free-delivery progress ("Add Rs 200 more for free delivery"), cart kept on the device. |
| **Checkout** | No account needed; delivery or pickup; PIN code shows delivery options and price; discount codes; tax shown; all payment methods the shop enabled. |
| **After purchase** | Private order page with status, payment instructions, tracking, downloads, chat button, review form; email receipt. |

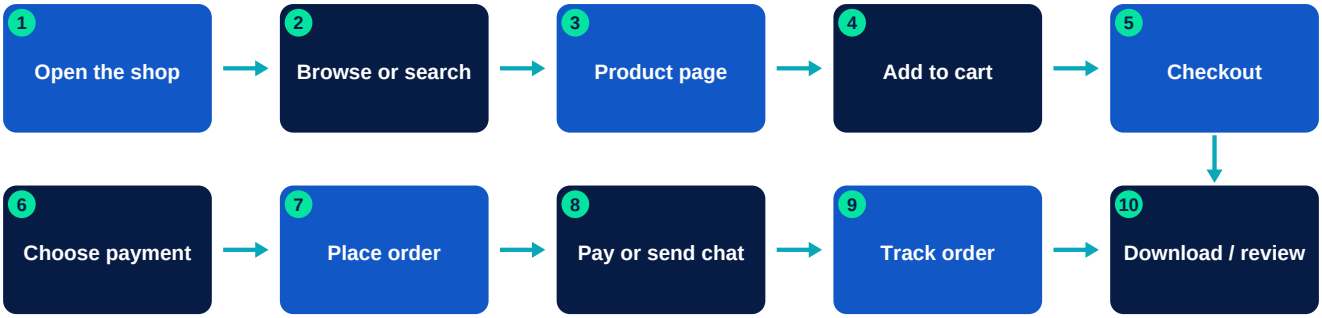

| Area | Features |
| --- | --- |
| **Languages** | English, Hindi, Arabic (right to left), detected from the browser with a switcher in the header. |
| **Access** | Works on phones, keyboard-accessible, dark-mode aware, audited with automated accessibility checks. |

SECTION 4

# Shopper (user side) flow

This is the journey of a customer buying from a store. Shoppers never create an account: their email and the private order link are enough.

## Journey at a glance

## Step by step

**1 Open the shop**

The shopper arrives from a link, social post, search engine or QR code at the shop address (for example *yourshop.com* or */s/demo*).

The storefront picks English, Hindi or Arabic from the browser's language; the shopper can switch in the header. Arabic switches the whole layout to right to left.

The home page shows the sections the merchant designed: hero banner, featured products, collections, testimonials, FAQ and the announcement bar.

**2 Browse and search**

Menus lead to collections and content pages (About, Shipping, Returns). The search box finds products by name; results can be sorted by price.

If the shop has nothing for sale yet, a friendly "Products coming soon" message is shown instead of an empty page.

**3 Look at a product**

The product page shows photos, price (with any compare-at price), description, ratings and verified reviews.

**Physical products**: the shopper picks options such as size and colour; low stock shows "Only N left" and sold-out variants can't be added.

**Digital products**: the page explains "Instant download after payment" and any download limit.

**Services**: a date and time picker shows only open slots, based on the merchant's weekly hours and capacity.

**4 Add to cart**

Items go into a cart kept on the device. The cart lets the shopper change quantities or remove items and shows how much more is needed for free delivery.

**5 Checkout: contact and delivery**

The shopper enters name, email (for the receipt) and phone.

They choose **Delivered to your address** or **Collect from the shop** (if the merchant offers pickup).

For delivery, entering the PIN code looks up the shipping zone and shows the delivery speeds and prices. If the shop does not deliver there, the shopper is told immediately.

Orders with only downloads or bookings skip delivery entirely: "Nothing to ship".

**6** **Checkout: discounts and totals**

The shopper can enter a discount code. Automatic offers (such as Buy 2 get 1 free) apply on their own.

The summary shows items, discount, delivery and tax ("Includes Rs 54 GST" or tax added), and the total. Prices are always recalculated by the server, so what is shown is what is charged.

**7** **Choose how to pay**

| Method | What the shopper sees |
|---|---|
| **Razorpay** | Card, UPI, netbanking or wallet, paid securely on Razorpay's window. |
| **Stripe** | Card payment on Stripe's secure checkout page. |
| **WhatsApp / Telegram** | The order is written into a ready-made chat message to the shop; payment is arranged in the chat. |
| **UPI / Bank transfer** | The shop's UPI ID or bank details, with the merchant's instructions, shown after placing the order. |
| **Cash on delivery** | Pay when the order arrives (only where the merchant allows COD for that zone). |

**8** **Place the order**

The order is created with a number and a private order link, and a receipt is emailed.

**Card payments**: the payment window opens straight away. Items are held for 30 minutes; if the payment is not completed, the order is cancelled and the stock released. The order page offers "Complete your payment" until then.

**Chat orders**: WhatsApp opens with the order message written out ("just tap send"); for Telegram the message is copied and Telegram opens.

**UPI / bank / COD**: the order page shows "How to pay" and asks the shopper to mention the order number with the payment.

**9** **Follow the order**

The order page updates as the merchant works: *Awaiting payment*, *Payment received*, *Part of your order is on its way*, *Your order is on its way* (with carrier and tracking), or *Cancelled*, and shows refunds.

Emails are sent when the order is placed and when items ship.

**10** **Download, attend, review**

**Downloads** appear on the order page as soon as payment is confirmed, within the merchant's limits and expiry. They are revoked if the order is cancelled or fully refunded.

**Bookings** are confirmed by email with the chosen date and time.

After delivery the shopper is emailed a review link (valid 60 days). They rate each item with stars and words; the review goes live straight away or after the merchant approves it.

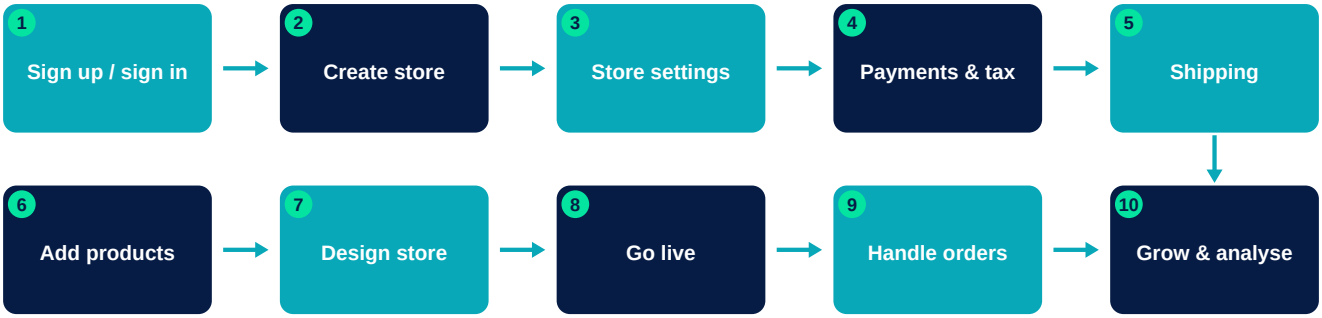

**Privacy for shoppers:** visit tracking is anonymous (no IP addresses or personal data), Do Not Track is respected, and the order link is the only way to see an order.

SECTION 5

# Merchant (admin side) flow

This is the journey of a merchant and their team, from creating an account to running the store every day. It has four stages: get started, set up the store, sell and fulfil, then grow and manage.

## Journey at a glance

## Stage A: Get started

**1 Create an account or sign in**

The merchant opens the admin and signs up with email and password (single sign-on is also supported). Sessions are kept on the server and expire safely.

A person invited by a store owner opens the invitation link, signs in or signs up, and joins that store with the role they were given.

**2 Create a store**

The merchant names the store and chooses its web address (for example */s/my-shop*); the address is checked to be free as they type.

They land in the store shell: a sidebar with the 14 modules grouped as Overview, Catalog, Sales, Operations, Growth and Store. One account can create and switch between several stores.

## Stage B: Set up the store

**1 Fill in Settings**

**General**: contact email and phone, currency, time zone, business address and GSTIN.

**Checkout**: allow delivery and/or pickup (with pickup address), WhatsApp and Telegram numbers for chat ordering.

**Domain** (optional): add their own domain, create the DNS TXT record shown, and click verify; HTTPS is set up automatically.

**2 Set up payments and tax**

In **Payments & Finances**, connect Razorpay or Stripe by pasting their API keys and webhook secret, and set the webhook URL shown in the dialog in the gateway dashboard. The keys are checked with the gateway before saving. Test keys let them try a payment end to end.

Turn on offline methods (UPI ID, bank details, cash on delivery) and write the payment instructions shoppers will see.

Set tax: GST or VAT, prices inclusive or tax added, and a default rate (products can override it).

**3** **Set up shipping**

Create shipping zones (for example "Maharashtra" by state, or "Pune" by PIN prefix 411), add rates (flat, by weight or by order value, with several speeds) and a free-shipping threshold.

Choose per zone whether cash on delivery is allowed, and add local pickup if wanted.

**4** **Add the catalogue**

Upload images in the **Media Library** (scanned for malware automatically).

Create products one by one in **Products**, choosing physical, digital or service. Add options and variants with prices, SKUs and stock; attach files for digital products; set weekly hours, slot length and capacity for services.

Or import many products from a CSV: upload, review the preview of what will be created or updated and any errors, then confirm.

Use **AI Studio** to draft descriptions, SEO and tags, and apply the proposals field by field.

Group products into **Collections**, by hand or by rules, and set opening stock in **Inventory**.

**5** **Design the storefront**

In **Store Design**, arrange home page sections, pick colours (contrast is checked), fonts, buttons and logo, add an announcement bar and header/footer menus.

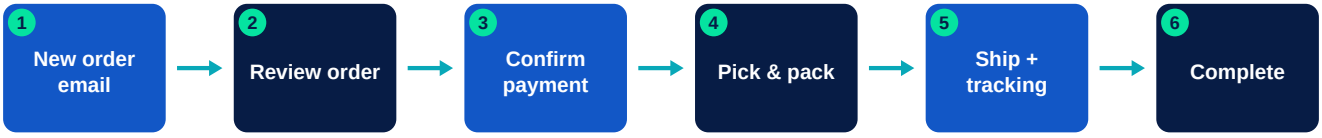

Create content pages from templates (About, Shipping, Returns, Privacy, Terms, Contact).

Changes autosave as a draft. Preview on desktop and phone, share a signed preview link with others, then **Publish** (or discard the draft).

**6** **Go live**

Set products to **Active** and share the shop link. The Dashboard checklist shows anything still missing.

## Stage C: Sell and fulfil (daily work)

**1** **A new order arrives**

The merchant gets a new-order email, and the order appears in **Orders** under the right tab (unpaid or to fulfil). Card orders paid through Razorpay or Stripe are marked paid automatically by the gateway's signed webhook.

**2** **Confirm payment for offline and chat orders**

For WhatsApp, Telegram, UPI, bank transfer or COD orders, the merchant checks the payment (in the chat, bank or UPI app, or on delivery) and clicks **Mark as paid**. Digital downloads unlock for the shopper at this moment.

**3** **Fulfil**

Fulfilment staff pick and pack the items and record a fulfilment with carrier and tracking number. Part of an order can be shipped first (partial fulfilment); the shopper is emailed each time.

Bookings are managed from the **Bookings** calendar.

**4** **Invoices, notes and customers**

Download a PDF invoice (with GSTIN when set), add internal notes to the timeline, and open the **Customer** to see their order history.

5 **Handle problems**

**Cancel** an order, choosing whether to put items back in stock.

**Refund** all or part of an order: back to the card through the gateway, or recorded by hand for offline payments, with optional restock. Full refunds revoke digital downloads.

Review **Abandoned checkouts** to follow up with shoppers who did not finish.

6 **Keep stock right**

Every sale, cancellation and refund updates stock automatically. In **Inventory**, staff adjust stock with a reason and can see the full history.

## Stage D: Grow and manage

1 **Run offers**

Create codes or automatic offers: percentage, amount, free shipping or Buy X get Y, with minimum spend, scope, schedule and usage limits. Track redemptions.

2 **Moderate reviews**

Publish, hide or reply to reviews from verified buyers, or let 4 and 5 star reviews publish automatically. Use AI Studio to summarise them.

3 **Read the numbers**

The **Dashboard** compares KPIs with the previous period. **Analytics** shows revenue, visitors, conversion funnel, traffic sources, top products and repeat buyers, with CSV export. **Payments & Finances** shows takings and the ledger.

4 **Use AI for insight**

Ask AI Studio for sales insights or new copy in 13 languages. Each store has a daily allowance, and nothing changes until applied.

5 **Manage the team**

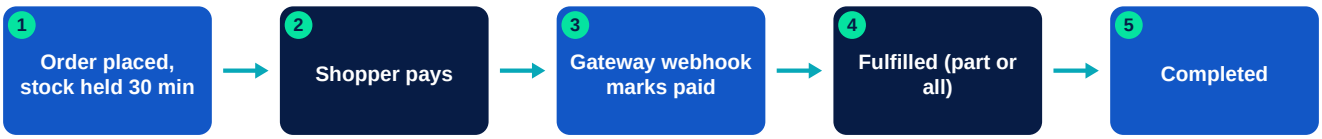

Invite people by link or email under **Settings > Staff**, choose their role, change roles or remove members. Check the **Audit log** to see who changed what.

SECTION 6

# Order lifecycle

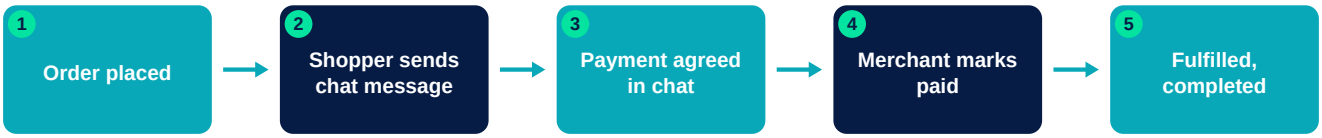

Every order has a payment status and a fulfilment status. How it moves depends on the payment method the shopper chose.

## Card payment (Razorpay or Stripe)

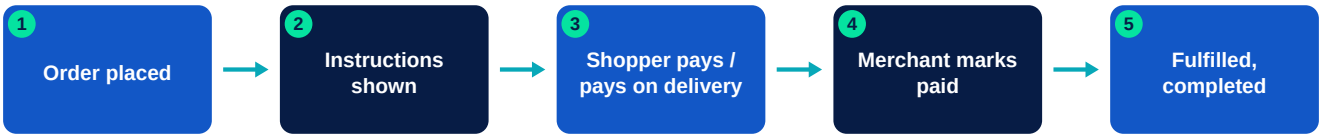

If the shopper does not pay within 30 minutes, the worker cancels the order and releases the stock.

## Chat order (WhatsApp or Telegram)

## UPI, bank transfer or cash on delivery

| Event | What happens automatically |
|---|---|
| **Payment confirmed** | Order moves to "to fulfil"; digital downloads unlock; takings update. |
| **Item shipped** | Shopper is emailed with carrier and tracking; order page updates. |
| **Order delivered / completed** | Review request is emailed to the shopper. |
| **Cancelled** | Optional restock; digital downloads revoked. |
| **Refunded** | Money returned through the gateway or recorded; optional restock; full refund revokes downloads. |
| **Unpaid card order after 30 min** | Order cancelled and stock released by the worker. |

SECTION 7

# Security, privacy and platform

| Area | How it works |
|---|---|
| **Store isolation** | Every row of merchant data belongs to one store and is protected by database row-level security. A user only reaches a store they are an active member of; any other store returns "not found". |
| **Sign-in and sessions** | Email and password or single sign-on. Sessions are stored on the server (only a hash of the token is kept) in a secure cookie. Changes must come from the admin's own site. |
| **Payment keys** | Each merchant's gateway keys are checked, then encrypted at rest. Webhooks are verified with the gateway's signature. |
| **Files** | Uploads are scanned for malware. Digital product files are private and served only through signed, expiring links. |
| **Audit trail** | An append-only audit log records every important change: who, what and when. |
| **Shopper privacy** | Analytics store no IP addresses or personal data, honour Do Not Track and delete raw events after 90 days. |
| **Reliability** | Background jobs are durable and retried; emails and events are written in the same transaction as the change they record, so none are lost. |
| **Quality** | Automated tests (unit and integration, including a full payment flow), accessibility audits on every page, page-speed budgets, and CI with automatic deployment and rollback on AWS. |

## Technology

TypeScript throughout; Next.js for the admin and storefront; an Express API; PostgreSQL with row-level security; a background worker; Razorpay and Stripe for cards; OpenAI or Google Gemini for AI Studio; hosted on AWS (EC2, Aurora PostgreSQL, S3, SES email) with automatic HTTPS.

APPENDIX

# Permissions matrix

Which role can open and change each module. "View" means read only.

| Module | Owner | Admin | Staff | Fulfilment | Analyst |
|---|---|---|---|---|---|
| **Dashboard** | Yes | Yes | Yes | Yes | Yes |
| **Products, Collections** | Yes | Yes | Yes | View | View |
| **Inventory** | Yes | Yes | Yes | Yes | View |
| **Media Library** | Yes | Yes | Yes | - | - |
| **Orders (fulfil, mark paid, cancel)** | Yes | Yes | Yes | Yes | View |
| **Refunds** | Yes | Yes | - | - | - |
| **Customers** | Yes | Yes | View | View | View |
| **Offers** | Yes | Yes | Yes | - | - |
| **Reviews** | Yes | Yes | Yes | - | - |
| **Shipping** | Yes | Yes | - | - | - |
| **Payments (connect, methods)** | Yes | Yes | - | - | - |
| **Finances (takings, ledger)** | Yes | Yes | - | - | View |
| **Analytics** | Yes | Yes | View | - | View |
| **Store Design** | Yes | Yes | Yes | - | - |
| **AI Studio** | Yes | Yes | Yes | - | - |
| **Settings, Staff, Audit log** | Yes | Yes | - | - | - |
| **Store address, suspension, plan** | Yes | - | - | - | - |
